

How We Find... Wireless Bugs and Video Cameras

COUNTERESPIONAGE CONSULTANTS TO BUSINESS AND GOVERNMENT

Radio Reconnaissance Spectrum Analysis® (RRSA)

Murray Associates Case Histories...

Client: Yes.

Location: President's office

Problem Solved: Yes.

You see a conference table in the foreground. The president's desk and telephone are near the rear wall. A covert wireless spycam was broadcasting this scene, with sound, a distance of approximately 300 feet. Employees in an adjacent building always seemed to know about executive decisions before they were formally announced. The spycam was built into an item normally seen on the credenza.

Client: Yes.

Location: Sales Conference Room.

Problem Solved: Yes.

Visiting product vendors were able to eavesdrop – from the parking lot – on strategic client discussions, before during and after meetings with them. A wireless surveillance camera broadcast both picture and sound a distance of approximately 300 feet. The camera and microphone were built into an item normally seen on the display shelf.

Client: No.

Location: Airport – 12 miles away from our TSCM search location.

This unusual pre-drone days aerial video surveillance was captured during an inspection at a client's location. The large airplane – non-commercial, specially modified – was the specific target. This clip from the captured video is included to demonstrate our detection capabilities.
